

Ashish Golchha

Full-Stack Developer

✉ ashish.golchha23@gmail.com | ☎ +91 9079287003 | 📍 Bikaner, Rajasthan | 🌐 [Portfolio](#)

Summary

Results-driven Full Stack and AI-focused Developer with hands-on experience in building scalable backend systems, REST APIs, AI-powered applications, and automation workflows using Python, Flask, and web technologies. Skilled in developing intelligent solutions using GenAI, RAG pipelines, and database-driven architectures with MySQL, SQLAlchemy ORM, and Supabase.

Experienced in building and deploying applications involving PDF RAG, Image RAG, authentication systems, AI chat assistants, payroll management systems, and recruitment automation platforms. Worked with technologies such as OpenCV, YOLO, Twilio, WhatsApp Business API, Gemini API, Google OAuth Client, Streamlit, and Tailwind CSS to create applications.

Strong understanding of architecture, API integrations, database management, and deployment workflows efficiently!!

Experience

Axilivo Technologies Pvt. Ltd. Software Engineer Intern https://www.axilivo.com/	Bikaner, Rajasthan October 2025 - Present
--	--

Education

Shri Jain P.G. College B.Com (Bachelor of Commerce)	Bachelor's Degree • 76 % March 2024-Present
Seth Tolaram Bafna Academy Commerce	Higher Secondary Education / Schooling • 79 % 2017 – 2019

Skills

Python Strong understanding of Python for backend, scripting, and AI development.	Flask Experience building REST APIs, handling routes, middleware, and service-layer architecture.
MySQL Manage relational database structures, queries, and optimization.	TailwindCSS Building fast and responsive UI layouts with utility-first CSS.
Git & GitHub Version control, branch management, and collaborative development.	Object-Oriented Programming Good understanding of classes, objects, inheritance, and design patterns.
ORM (SQLAlchemy) Database abstraction using SQLAlchemy for clean and maintainable data models.	REST API Designing and consuming RESTful APIs with proper status codes and documentation.

Gemini API / GenAI

Integration of Google Gemini LLM for intelligent AI-powered applications.

Streamlit

Rapid development of interactive data and AI web applications.

YOLO Model

Object detection integration using YOLO for image and video analysis.

Supabase

Backend-as-a-service for database, authentication, and real-time features.

Vercel

Frontend and serverless deployment on Vercel for production-ready web apps.

RAG Pipelines

Built PDF RAG, SQL RAG, and Image RAG systems with vector embeddings and semantic search.

OpenCV

Image processing and computer vision operations for real-world applications.

Twilio / WhatsApp Business API

SMS, voice, and WhatsApp messaging integrations for notifications and automation.

Google OAuth

Secure user authentication using Google OAuth 2.0 client integration.

Postman

API testing, documentation, and workflow automation.

Interests

Playing Games

Playing cricket and online strategy-based games that improve strategic thinking, teamwork decision-making, problem-solving abilities and performance under pressure.

Coding and Web Development

I enjoy building scalable web applications, exploring AI-powered technologies, and continuously improving my skills in backend development and automation

Soft Skills

Communication | Teamwork | Time Management | Leadership

Strong foundation in communication, teamwork, time management, and leadership developed through academic projects and collaborative work environments. Able to clearly convey ideas, actively listen, and work effectively within a team to achieve shared goals.

Skilled in managing tasks efficiently, prioritizing deadlines, and maintaining consistency under pressure.

Demonstrated leadership by taking initiative, guiding team members, and ensuring smooth coordination to deliver results on time.

Languages

English

Basic to intermediate proficiency in speaking reading and writing with the ability to understand technical concepts communicate in professional environments participate in team discussions and continuously improve communication skills through learning and practical experience.

Hindi

Native proficiency in Hindi with strong verbal and written communication abilities. Comfortable in public speaking interpersonal communication team coordination and explaining ideas clearly in both formal and informal environments.

Projects

1. Punchdesk Project

October 2025 – Present

<https://punchdesk.axilivotechnologies.com>

- Developed a production-ready attendance and payroll backend using **Python, Flask, SQLAlchemy (ORM), and MySQL** with scalable service-layer architecture.
- Implemented **JWT-based authentication** and multi-role authorization to securely manage different user roles.
- Built mobile and biometric attendance flows, and a comprehensive salary module for automated payroll calculation based on attendance, leaves, and working hours.
- Integrated **WhatsApp Business API** for secure Forgot Password OTP verification and employee communication workflows.
- Developed **REST API** endpoints with centralized exception handling and standardized API responses. Tested and validated APIs using **Postman**.
- Optimized database operations and backend workflows for performance and scalability.

2. Archery Management System

January 2026 – Present

- Full-stack championship management platform built with **Python, Flask, SQLAlchemy (ORM), JavaScript, HTML, CSS, TailwindCSS**, and **Supabase**.
- Core features: role-based access control, competition setup, participant management, score tracking, and dynamic leaderboards.
- Implemented advanced tournament logic including bow-type restrictions, age-group validations, automated score calculations, and team scoring systems.
- Designed and developed **REST APIs** for all data operations; tested and documented APIs using **Postman**.
- Built responsive dashboards for admins and students with scalable backend architecture and optimized database operations.

3. AI PDF Chat Assistant

October 2025

<https://pdf-chat-assistent.vercel.app/>

- Built an AI-powered Q&A; web app using **Python, Flask, Gemini API**, and **GenAI** for intelligent document interaction.
- Implemented complete **PDF RAG pipeline**: PDF text extraction, content chunking, vector embeddings, and semantic search for context-aware responses.
- Used **Pillow** for image extraction and **Image RAG** capabilities to handle image-embedded PDFs.
- Designed to reduce hallucinations by grounding all responses strictly in document content.
- Deployed on **Vercel** with real-time query handling and smooth UX for large documents.

4. AI Resume Analyzer

December 2025

<https://ai-resume-analyzer-one-pink.vercel.app/>

- AI-powered resume analysis tool built with **Python, Flask, Gemini API**, and **GenAI** for smart skill and ATS evaluation.
- Implemented **PDF RAG** for resume parsing and **SQL RAG** for keyword matching against job requirement databases.
- **Highlights missing keywords**, suggests structural improvements, and **evaluates ATS compatibility**.
- Deployed on **Vercel**; APIs tested and documented using **Postman**.

5. JD-2-Q (Job Description → Questions Generator)

February 2026

<https://jd-2-q-job-description-to-questions.vercel.app/>

- AI tool that converts job descriptions into tailored interview questions using **Python, Flask, Gemini API**, and **GenAI**.
- Extracts key requirements, skills, and responsibilities from raw JD content via **REST API** and LLM-based text analysis.
- Generates structured technical and HR question sets aligned with real-world interview expectations.
- Frontend deployed on **Vercel**; backend APIs validated via **Postman**.

6. Ashish Assistant — AI Clone

April 2026

<https://ashish-assistant.vercel.app/>

- Developed an **AI-powered personal assistant** with intelligent chat and voice interactions for a human-like conversational experience.
- Designed contextual and **memory-aware conversations** to deliver personalized responses and task assistance.
- Built using **Python, Flask, JavaScript**, and **Tailwind CSS** with scalable backend architecture and **real-time AI communication**.
- Implemented responsive futuristic **UI/UX** and optimized frontend-backend workflows for seamless interaction.
- Integrated custom prompt engineering and conversational tuning to create natural and **engaging AI interactions**.

7. Evyorre

May 2026

<http://evyorre.com>

- Developed a luxury candle e-commerce platform using **Python, Flask, JavaScript, HTML, CSS**, and **Supabase** with a scalable and modular backend architecture.
- Designed and implemented responsive premium **UI/UX** sections with mood-based collections, interactive product showcases, animations, and mobile-first optimization.
- Built dynamic product catalogue workflows including category-based filtering, wishlist functionality, and database-driven product rendering for seamless user experience.
- Integrated secure backend features such as **authentication**, contact workflows, and product management with **optimized database operations**.
- **Enhanced frontend responsiveness** and overall performance using reusable components, adaptive layouts, and modern styling techniques for a smooth cross-device experience.
